

Appendix B: Team CLAUDE.md Master Template

Complete team CLAUDE.md template from Chapter 14. Replace all [brackets] with your team's specifics. Commit it, assign an owner, review quarterly.

```
# [Team / Product Name] – Claude Code Context
# Version: 1.0.0 | Last updated: [YYYY-MM-DD]
# Owner: [Lead developer name]

## About this codebase
[2-3 sentences: product description, users, current stage.]
Optimize for [speed and iteration / stability / performance].

## Tech stack
Frontend: [e.g. Next.js 15 App Router + TypeScript + Tailwind]
Backend: [e.g. FastAPI + Python 3.11]
Database: [e.g. PostgreSQL 16 – managed]
Auth: [e.g. Auth.js v5 + Google OAuth]
Testing: [e.g. Vitest + Playwright]
Deployment: [e.g. Vercel + Railway]
CI/CD: [e.g. GitHub Actions]

## Folder structure
[List key directories and their purpose.]

## Code conventions
Naming: files=kebab-case, components=PascalCase, functions=camelCase
Types: strict mode – no @ts-ignore, no 'any' without TODO comment
Errors: { error: { code: string, message: string } }
HTTP: 400 validation, 401 auth, 403 forbidden, 404, 409, 500
Async: always await – no floating promises, timeout external calls (5s)
Logs: use src/lib/logger.ts – no console.log in committed code

## Testing requirements
Unit: all utility functions, actions, helpers. 85%+ coverage.
Integration: all API endpoints and auth flows. Use test database.
E2E: critical user flows. Run in CI on every PR to main.

## Patterns we use – copy, don't reinvent
[Your Server Action / Repository / Error handler patterns here]

## What we do NOT want
- No inline styles - No direct DB outside src/db/queries/
- No console.log - No 'any' without TODO comment
[Your team's specific anti-patterns]

## Current focus areas
[Updated each sprint. Current priority: ____]

## Development commands
npm run dev | npm run test | npm run lint | npm run db:push

## Who to ask
[Name / handle]: [area of ownership]

## Changelog
[YYYY-MM-DD] v1.0.0 – Initial version
```
